8.	Annexure I(List of Trade Tools & Equipment)	60

During the two-year duration of Technician Power Electronic Systems trade, a candidate is trained on Professional Skill, Professional Knowledge and Employability Skillrelated to job role. In addition to this, a candidate is entrusted to undertake project work and extracurricular activities to build up confidence. The broad components covered under Professional Skill subject are as below:-

FIRST YEAR: In this year, the trainee learns about safety and environment, use of fire extinguishers, artificial respiratory resuscitation to begin with. He gets the idea of trade tools & its standardization, familiarize with basics of electricity, test the cable and measure the electrical parameter. Skilling practice on different types & combination of cells for operation and maintenance of batteries being done. Identify and test passive and active electronic components.operate DSO and perform various functions. Construct and test unregulated and regulated power supplies. Practice soldering and de-soldering of various types of electrical and electronic components on through-hole PCBs. The candidate will be able to construct and test amplifier, oscillator and wave shaping circuits. Testing of power electronic components. Construct and test power control circuits. Identify and test opto-electronic devices. Able to achieve the skill on SMD Soldering and De-soldering of discrete SMD components. Verifyingthe truth tables of various digital ICs by referring Data book. Practice circuit simulation software to simulate and test various circuits. Identify various types of LEDs, LED displays and interface them to a digital counter and test. Construct and test various circuits using linear ICs 741 & 555.

SECOND YEAR: In this year, the trainee will be able to assemble a computer system, install OS, Practice with MS office. Use the internet, browse, create mail IDs, download desired data from internet using search engines. Gaining the skill by practicing SMDSoldering and Desoldering.Introduction with protection devices. Familiarize with the instruction set of 8051 microcontroller. Interface a model application with the Microcontroller kit and run the application. Working with three phase rectifier, chopper, SMPS, inverters and UPS.Interpret electrical control circuits used in industries. Installation and setup of fibre-optic communication system. Identify construction of various electro-pneumatic circuits. Make simple project applications using ICs, transformer and other discrete components. The trainee will work on installing a solar panel, execute testing and evaluate performance by connecting the panel to the inverter. Operation of different process sensor, identify, wire & test various sensors of different industrial processes by selecting appropriate test instruments. Assemble, test & troubleshoot various digital controlled field devices and execute the result. Perform speed control of DC machine and single phase and 3-phase AC machines. Install, configure and check the performance of AC and DC drive to control the speed. Perform speed control of servo motor and test different industrial process circuit by selecting the suitable function. Install, test

& control the Electro-Pneumatic actuators using various pneumatic valves. Execute the operation of different indication on PLC modules and wire different field devices of PLC and configure the system and perform the suitable function.

2.1 GENERAL

The Directorate General of Training (DGT) under Ministry of Skill Development & Entrepreneurship offers a range of vocational training courses catering to the need of different sectors of economy/ Labour market. The vocational training programmes are delivered under the aegis of Directorate General of Training (DGT). Craftsman Training Scheme (CTS) with variants and Apprenticeship Training Scheme (ATS) are two pioneer schemes of DGT for strengthening vocational training.

Technician Power Electronic Systemstrade under CTS is one of the popular newly designed courses. The earlier course was Industrial Electronics. The course is of two years duration. It mainly consists of Domain area and Core area. The Domain area (Trade Theory & Practical) imparts professional skills and knowledge, while Core area (Employability Skills) imparts requisite core skill & knowledge and life skills. After passing out the training program, the trainee is awarded National Trade Certificate (NTC) by DGT which is recognized worldwide.

Traineebroadlyneeds to demonstrate that they are able to:

- Read & interpret technical parameters/documentation, plan and organize work processes, identify necessary materials and tools;
- Perform task with due consideration to safety rules, accident prevention regulations and environmental protection stipulations;
- Apply professional knowledge, core skills & employability skills while performing the job, repair and maintenance work.
- Check the job with circuit diagrams/components as per drawing for functioning, diagnose and rectify faults in the electronics Components/modules.
- Document the technical parameters in tabulation sheet related to the task undertaken.

2.2 PROGRESSION PATHWAYS:

- Can join industry as Technician and will progress further as Senior Technician, Supervisor and can rise up to the level of Manager.
- Can become Entrepreneur in the related field.
- Can take admission in diploma course in notified branches of Engineering by lateral entry.
- Can join Apprenticeship programme in different types of industries leading to National Apprenticeship certificate (NAC).

- Can join Crafts Instructor Training Scheme (CITS) in the trade for becoming instructor in ITIs.
- Can join Advanced Diploma (Vocational) courses under DGT as applicable.

2.3 COURSE STRUCTURE:

Table below depicts the distribution of training hours across various course elements during a period of two years: -

Course Floment		Notional Training Hours	
S No.	lo. Course Element	1 st Year	2 nd Year
1	Professional Skill (Trade Practical)	840	840
2	Professional Knowledge (Trade Theory)	240	300
3	Employability Skills	120	60
	Total	1200	1200

Every year 150 hours of mandatory OJT (On the Job Training) at nearby industry, wherever not available then group project is mandatory.

4 On the Job Training (OJT)/ Group Project	150	150
--	-----	-----

Trainees of one-year or two-year trade can also opt for optional courses of up to 240 hours in each year for 10th/ 12th class certificate along with ITI certification or add on short term courses.

2.4 ASSESSMENT & CERTIFICATION

The trainee will be tested for his skill, knowledge and attitude during the period of course through formative assessment and at the end of the training programme through summative assessment as notified by the DGTfrom time to time.

a) The **Continuous Assessment** (Internal) during the period of training will be done by **Formative Assessment Method** by testing for assessment criteria listed against learning outcomes. The training institute has to maintain an individual trainee portfolio as detailed in assessment guideline. The marks of internal assessment will be as per the formative assessment template provided on www.bharatskills.gov.in.

b) The final assessment will be in the form of summative assessment. The All India Trade Test for awarding NTC will be conducted by **Controller of examinations**, **DGT**as per the guidelines. The pattern and marking structure is being notified by DGT from time to time. **The learning outcome and assessment criteria will be the basis for setting question papers for final assessment. The examiner during final examination will also check the individual trainee's profile as detailed in assessment guideline before giving marks for practical examination.**

2.4.1 PASS REGULATION

For the purposes of determining the overall result, weightage of 100% is applied for six months and one year duration courses and 50% weightage is applied to each examination for two years courses. The minimum pass percent for Trade Practical and Formative assessment is 60% & for all other subjects is 33%.

2.4.2 ASSESSMENT GUIDELINE

Appropriate arrangements should be made to ensure that there will be no artificial barriers to assessment. The nature of special needs should be taken into account while undertaking assessment. Due consideration to be given while assessing for team work, avoidance/reduction of scrap/wastage and disposal of scarp/wastage as per procedure, behavioral attitude, sensitive to environment and regularity in training. The sensitivity towards OSHE and self-learning attitude to be considered while assessing competency.

Assessment will be evidence based comprising some of the following:

- Job carried out in labs/workshop
- Record book/ daily diary
- Answer sheet of assessment
- Viva-voce
- Progress chart
- Attendance and punctuality
- Assignment
- Project work
- Computer based multiple choice question examination
- Practical Examination

Evidences and records of internal (Formative) assessments are to be preserved until forthcoming examination for audit and verification by examination body. The following marking pattern to be adopted for formative assessment:

	Performance Level	Evidence
((a) Marks in the range of 60%-75% to be allotte	d during assessment
I	For performance in this grade, the candidate	• Demonstration of good skill in the use of
5	should produce work which demonstrates	hand tools, machine tools and workshop
á	attainment of an acceptable standard of	equipment.
(craftsmanship with occasional guidance, and	• 60- 70% accuracy achieved while
(due regard for safety procedures and	undertaking different work with those
ı	practices	demanded by the component/job.
		 A fairly good level of neatness and
		consistency in the finish.
		 Occasional support in completing the
		proiect/job.

(b) Marks in the range of 75%-90% to be allotted during assessment

For this grade, a candidate should produce work which demonstrates attainment of a reasonable standard of craftsmanship, with little guidance, and regard for safety procedures and practices.

- Good skill levels in the use of hand tools, machine tools and workshop equipment.
- 70-80% accuracy achieved while undertaking different work with those demanded by the component/job.
- A good level of neatness and consistency in the finish.
- Little support in completing the project/job.

(c) Marks in the range of more than 90% to be allotted during assessment

For performance in this grade, the candidate, with minimal or no support in organization and execution and with due regard for safety procedures and practices, has produced work which demonstrates attainment of a high standard of craftsmanship.

- High skill levels in the use of hand tools, machine tools and workshop equipment.
- Above 80% accuracy achieved while undertaking different work with those demanded by the component/job.
- A high level of neatness and consistency in the finish.
- Minimal or no support in completing the project.

Electronics Fitter, General; fits, assembles and repairs various kinds of electronic equipment in factory or workshop or at place of use. Examines drawings and wiring diagrams; checks parts for accuracy of fit and minor adjustments; assembles parts or mounts them on chassis or panels with aid of hand tools; installs and connects wiring, soldering joints equipment, diagnoses faults with aid of electronic testing equipment; dismantles equipment if required and replaces faulty parts or wiring.

Electronics Fitters, other; include all other workers engaged in fitting, assembling, repairing and maintaining electronic equipment, machinery, appliances, etc., not elsewhere classified.

Electronics Mechanic; Electronic Equipment Mechanic repairs electronic equipment, such as computers, industrial controls, transmitters and telemetering control systems following blueprints and manufacturer's specifications and using hand tools and test instruments. Tests faulty equipment and applies knowledge of functional operation of electronic units and systems to diagnose cause of malfunction. Tests electronic components and circuits to locate defects, using instruments, such as oscilloscopes, signal generators, ammeters and voltmeters. Replaces defective components and wiring and adjusts mechanical parts, using hand tools and soldering iron. Aligns, adjusts and calibrates testing instruments. Maintains records of repairs, calibrations and test.

Solar Panel Installation Technician; is also known as 'Panel Installer', the Solar Panel Installation Technician is responsible for installing solar panels at the customers' premises. The individual at work checks the installation site, understands the layout requirement as per design, assesses precautionary measures to be taken, installs the solar panel as per customer's requirement and ensures effective functioning of the system post installation.

Optical Fiber Technician; is responsible for maintaining uptime and quality of the network segment (both optical media and equipment) assigned to him by undertaking periodic preventive maintenance activities and ensuring effective fault management in case of fault occurrence. He is also required to coordinate activities for installation and commissioning of Optical Fibre Cable (OF) as per the route plan.

Field Technician: UPS and Inverter; is also called, 'UPS Repair Technician', this is an after sales service job for installing and providing support to customers of different types of UPS and inverters. The individual at work installs the newly purchased UPS or inverter. The individual also interacts with customers to diagnose problems in them, assesses possible causes, rectifies faults or replaces faulty modules or recommends factory repairs for bigger faults as per the route plan.

PLC Assembly Operator; is responsible for completing the printed circuit board (PCB) and box assembly of the PLC components. The individual at work assembles the power supply and micro-controller PCBs, sends them for programming and completes the box assembly thereafter.

Plan and organize assigned work and detect & resolve issues during execution. Demonstrate possible solutions and agree tasks within the team. Communicate with required clarity and understand technical English. Sensitive to environment, self-learning and productivity.

List of Tools and Equipment	As per Annexure – I	

Learning outcomes are a reflection of total competencies of a trainee and assessment will be carried out as per the assessment criteria.

5.1 LEARNING OUTCOMES (TRADE SPECIFIC)

FIRST YEAR:

- 1. Perform basic workshop operations using suitable tools for fitting, riveting, drilling etc. following safety precautions. (ELE/N9470)
- 2. Select and perform electrical/ electronic measurement of single range meters and calibrate the instrument. ELE/N9471)
- 3. Test & service different batteries used in electronic applications and record the data to estimate repair cost. ELE/N9472)
- 4. Test various electronic components using proper measuring instruments and compare the data using standard parameter. ELE/N9473)
- 5. Measure the various parameters by DSO and execute the result with standard one. ELE/N9474)
- 6. Plan and execute soldering & de-soldering of various electrical components like Switches, PCB & Transformers for electronic circuits. (ELE/N7812)
- 7. Assemble simple electronic power supply circuit and test for functioning. ELE/N9475)
- 8. Construct, test and verify the input/output characteristic of various analog circuits. (ELE/N7202)
- 9. Plan and construct different power electronic circuits and analyse the circuit functioning. ELE/N9476)
- 10. Select the appropriate opto-electronics components and verify the characteristics in different circuit. ELE/N9477)
- 11. Assemble, test and troubleshoot various digital circuits. (ELE/N7812)
- 12. Simulate and analyze the analog and digital circuits using Electronic simulator software. ELE/N9478)
- 13. Construct and test different circuits using IC 741 Operational amplifiers & IC 555 linear integrated circuits and execute the result. ELE/N9479)
- 14. Read and apply engineering drawing for different application in the field of work.
- 15. Demonstrate basic mathematical concept and principles to perform practical operations. Understand and explain basic science in the field of study.

SECONDYEAR:

16. Install, configure, interconnect given computer system(s) and demonstrate and utilize application packages for different application. (ELE/N3155)

- 17. Identify, place, solder and de-solder and test differentSMD discrete components and IC's package with due care and following safety norms using proper tools/setup. (ELE/N7812)
- 18. Rework on PCB after identifying defects from SMD soldering and de-soldering. (ELE/N7812)
- 19. Construct different electrical control circuits and test for their proper functioning with due care and safety. (ELE/N7812)
- 20. Test, service and troubleshoot the various components of different domestic/ industrial programmable systems. (ELE/N9480)
- 21. Plan and interface the LCD, LED, DPM panels to various circuits and evaluate performance. (ELE/N3102)
- 22. Assemble, test and troubleshoot single phase & 3-phase controlled and uncontrolled rectifier using SCR. (ELE/N9481)
- 23. Construct, test & repair different chopper using MOSFET and IC based DC-DC converter and execute the result. (ELE/N9482)
- 24. Detect the faults and troubleshoot Power supplies, SMPS, UPS and inverter. (ELE/N3102)
- 25. Prepare fiber optic setup and execute transmission and reception. (ELE/N9483)
- 26. Install a solar panel, execute testing and evaluate performance by connecting the panel to the inverter. (ELE/N5902)
- 27. Execute the operation of different process sensor, identify, wire & test various sensors of different industrial processes by selecting appropriate test instruments. (ELE/N9484)
- 28. Assemble, test & troubleshoot various digital controlled field devices and execute the result. (ELE/N9485)
- 29. Perform speed control of DC machine and single phase and 3-phase AC machines. (ELE/N9486)
- 30. Install, configure and check the performance of AC and DC drive to control the speed. (ELE/N9487)
- 31. Perform speed control of servo motor and test different industrial process circuit by selecting the suitable function. (ELE/N9488)
- 32. Install, test & control the Electro-Pneumatic actuators using various pneumatic valves. (ELE/N9489)
- 33. Execute the operation of different indication on PLC modules and wire different field devices of PLC and configure the system and perform the suitable function. (ELE/N9490)
- 34. Read and apply engineering drawing for different application in the field of work.
- 35. Demonstrate basic mathematical concept and principles to perform practical operations. Understand and explain basic science in the field of study.

	LEARNING OUTCOMES	ASSESSMENT CRITERIA
·		FIRST YEAR
1.	Perform basic workshop operations using suitable tools for fitting, riveting, drilling etc. following safety precautions.	Identify basic hand tools for fitting, riveting, drilling etc. with due care and safety. Fix surface mounting type of accessories in a panel board.
	(ELE/N9470)	Connect electrical accessories. Make and wire up of a test board and test it.
	, ,	The second secon
2.	Select and perform electrical/ electronic measurement of single range meters and calibrate the instrument. (ELE/N9471)	Plan work in compliance with standard safety norms. Identify the type of electronic instruments. Determine the measurement errors while measuring resistance by voltage drop method.
	(ELE/109471)	Extend the range of MC voltmeter and ammeter. Measure the value of resistance, voltage and current using digital multimeter. Calibrate analog multimeter.
3.	Test & service different batteries used in electronic applications and record the data to estimate repair cost. (ELE/N9472)	Identify tools and instruments for testing of batteries. Observe safety procedure during testing of batteries and work as per standard norms and company guidelines. Identify the primary and secondary cells. Measure and test the voltages of the given cells/batteryusing analog/ digital multimeter. Charging and discharging the battery. Maintain and estimate the repair cost of secondary battery. Use a hydro meter to measure the specific gravity of thesecondary battery.
4.	Test various electronic components using proper measuring instruments and compare the data using standard parameter. (ELE/N9473)	Ascertain and select tools and materials for the job and make this available for use in a timely manner. Plan work in compliance with standard safety norms. Identify the different types of resistors. Measure the resistor values using colour code and verify the reading by measuring in multimeter. Identify the power rating using size. Measure the resistance, Voltage, Current through series and parallel connected networks using multimeter. Identify different inductors and measure the values using LCR meter. Identify the different capacitors and measure capacitance of

		various capacitors using LCR meter.
		Ascertain and select tools and materials for the job and make
		this available for use in.
5.	Measure the various parameters by DSO and execute the result with standard one. (ELE/N9474)	Identify and demonstrate various control elements on front panel of a DSO. Measure different parameters of electronic signals using DSO. Store the waveform of a signal in DSO. Connect DSO with a printer and take printout of signal
		waveforms.
6.	Plan and execute soldering & de-soldering of various electrical components like switches, PCB &transformers	Plan work in compliance with standard safety norms. Identify different types of mains transformers and test. Identify the primary and secondary transformer windings and testthe polarity.
	for electronic circuits. (ELE/N7812)	Measure the primary and secondary voltage of different transformers.
		Solder the given components.
		Identify and test the variac. Avoid waste, ascertain unused materials and components for disposal, store these in an environmentally appropriate manner and prepare for disposal.
		,
7.	Assemble simple electronic power supply circuit and test for functioning. (ELE/N9475)	Practice soldering on components, lug and board with safety. Identify the passive/active components by visual appearance, Code number and test for their condition. Identify the control and functional switches in CRO and measure the D.C. & A.C. voltage, frequency and time period. Construct and test a half & full wave rectifiers with and without filter circuits. Construct and test a bridge rectifier with and without filter circuits. Construct and test a Zener based voltage regulator circuit.
8.	Construct, test and verify the input/ output characteristics of various analog circuits. (ELE/N7202)	Ascertainandselecttools andinstrumentsforcarryingoutthe jobs. Plan and work in compliance with standard safety norms. Practice on soldering components on lug board with safety. Identify the passive/active components by visual appearance, code number and test for their condition. Construct and test the transistor based switching circuit. Construct and test CB, CE & CC amplifier circuit.

		Accortain the performance of different assillator sizevita
		Ascertain the performance of different oscillator circuits. Construct and test clipper, clamper and Schmitt trigger
		circuit.
_	Discount of different	Constant and test of Tourists and IEEE and IEEE
9.	Plan and construct different	Construct and test of Transistor and JFET amplifiers,
	power electronic circuits and	oscillators and multi vibrators.
	analyze the circuit	Construct and test a UJT as relaxation oscillator.
	functioning. (ELE/N9476)	Construct and test lamp dimmer using TRIAC/DIAC with safety.
		Construct and test MOSFET, IGBT test circuit and apply for suitable operation with proper safety.
		Construct and test the universal motor speed controller using SCR with safety.
		Construct and test switching circuits using optical devices.
4.0	Calcatatha	Discount to a surface of the surface
10.	Select the appropriate opto-	Plan work in compliance with standard safety norms.
	electronics components and	Identify the different types of LEDs and IR LEDs.
	verify the characteristics in	Measure the resistance, voltage, current through electronic
	different circuit. (ELE/N9477)	circuit using multimeter.
		Construct and test a circuit using photo transistor and verify its characteristics.
		Identify photocoupler/ optical sensor input/output terminals and measure the quantum of isolation between the terminals.
11.	Assemble, test and	Illustrate to practice the digital trainer kit with safety.
	troubleshoot various digital circuits. (ELE/N7812)	Identify various digital ICs, test IC using digital IC tester and verify the truth table.
		Construct and verify the truth table of all gates using NOR and NAND gates.
		Construct an adder cum subtractor circuits and verify the truth table.
		Construct a decoder and encoder, multiplexer and demultiplexer circuits and verify the truth table.
		Construct a multiplexer and de-multiplexer and verify the truth table.
		Construct and verify the truth table of various flip flop, counter and shift register circuits.
12	Simulate and analyze the	Plan the work incompliance with standard procedure.
12.	analog and digital circuits	Prepare simple analog and digital electronic circuits using the
	using Electronic simulator	simulator software.
	software. (ELE/N9478)	Simulate and test the prepared analog and digital circuits.
	JOICHAGIC. (LLL/143470)	Jimulate and test the prepared analog and digital circuits.

		Convertebration and since the last of the same
		Convert the prepared circuit into layout diagram.
		Explore various troubleshooting and fault finding by the resources provided in the simulation software.
		resources provided in the simulation software.
13.	Construct and test different	Demonstrate analog trainer kit with safety precautions.
	circuits using ICs	Identify various ICs, differentiate by code no. and test for
	741operational amplifiers &	their condition.
	ICs 555 linear integrated circuits and execute the	Construct and test various OP-AMP circuits.
	circuits and execute the result. (ELE/N9479)	Construct and test R-2R ladder type digital to analog converter circuit.
		Construct and test different configurations of 555 ICe.g. astable, monostable, bi-astable and VCO circuits.
14.	Read and apply engineering drawing for different	Read & interpret the information on drawings and apply in executing practical work.
	application in the field of work.	Read & analyze the specification to ascertain the material requirement, tools and assembly/maintenance parameters.
	WOTK.	Encounter drawings with missing/unspecified key
		information and make own calculations to fill in missing
		dimension/parameters to carry out the work.
15.	Demonstrate basic mathematical concept and	Solve different mathematical problems
	principles to perform practical operations. Understand and explain basic science in the field of study.	Explain concept of basic science related to the field of study
		SECOND YEAR
16.	Install, configure, interconnect	Plan, work in compliance with standard safety norms.
	given computer system(s) and demonstrate & utilize application packages for	Select hardware and software component.
		Install and configure operating systems and applications.
	different application. (ELE/N3155)	Integrate IT systems into networks.
	(,	Deploy tools and test programmes.
		Avoid e-waste and dispose the waste as per the procedure.
4-	Ideal Control	
17.	Identify place, solder/ de-	Identify the various crimping tools for various IC packages.
	solder and test different SMD discrete components and IC's	Identify different types of soldering guns and choose the suitable tip for the application.
	package with due care and	Practice soldering and de-soldering the different active and
	following safety norms using	passive components, IC base on GPCBs using solder, flux,
	<u> </u>	

proper tools/setup	
(ELE/N7812)	Make the necessary setting on SMD soldering station to
	solder and de-solder various ICs of different packages by
	following the safety norms.
	Identify SMD components, de-solder and solder the SMD
	components on the PCB.
	Check the cold continuity, identify loose/dry solder and
	broken track on printed wired assemblies and rectify the
	defects.
	Avoid waste, ascertain unused materials and components for
	safe disposal.
18. Rework on PCB after identifying defects from SMD	Plan the work in compliance with standard safety procedures.
soldering and de-soldering.	Demonstrate various tools and accessories used in PCB
(ELE/N7812)	rework.
	Construct a PCB to demonstrate defects on soldered joints.
	Repair defective soldered joints.
19. Construct different electrical	Measure the coil winding of the given motor.
control circuits and test for	Prepare the setup and control an induction motor using
their proper functioning with	aDOLstarter by following the safety norms.
due care and safety.	Construct a direction control circuit to change direction of an
(ELE/N7812)	induction motor.
	Connect an overload relay and test for its proper functioning.
	The state of the s
20. Test, service and troubleshoot	
the various components of	
different domestic/ industria	, , , , , , , , , , , , , , , , , , , ,
programmable systems	
(ELE/N9480)	Identify the address range of RAM & ROM.
	Write data into RAM & observe its volatility.
	Identify the port pins of the controller & configure the ports
	for Input & Output operation.
	Demonstrate entering of simple programs, execute &
	monitor the results.
21. Plan and interface the LCD	, , , , , , , , , , , , , , , , , , , ,
LED, DPM panels to various	
circuits and evaluate	, , , , , , , , , , , , , , , , , , , ,
performance.	Measure/current flowing through a sensor and display it on a
(ELE/N3102)	LCD/LED module (DPM).
	Avoid waste and dispose the waste as per the procedures.

22. Assemble, test troubleshoot single phase controlled uncontrolled rectifier SCR. (ELE/N9481)	and	Ascertain and select tools and instruments for carrying out the jobs. Plan and work in compliance with standard safety norms. Practice on soldering components on lug board with safety. Identify the passive/active components by visual appearance. Construct & Test 3-phase uncontrolled half wave rectifier. Construct & Test 3-phase uncontrolled Bridge rectifier. Construct & Test single phase half control rectifier using SCR. Construct & Test single phase full control rectifier using SCR. Construct & Test 3 phase controlled rectifiers (half wave & bridge) using SCR.	
23. Construct, test & different chopper MOSFET and IC based converter and executesult. (ELE/N9482)		Practice on soldering components on lug board with safety. Construct & test chopper circuit using MOSFET. Construct & test step up/step down type chopper circuit. Construct & test IC based DC –DC converter for different	
24. Detect the faults troubleshoot Power s SMPS, UPS and i (ELE/N3102)		due care and safety.	
25. Prepare fiber optic set execute transmission reception. (ELE/N9483)	-	Plan and select appropriate tools to complete the job safely.	

		,	
		Make optical fibre setup to transmit and receive analog and digital data.	
		Demonstrate and apply FM modulation and demodulation	
		using OFC trainer kit using audio signal and voice link.	
		Demonstrate PWM modulation and demodulation using OFC	
		trainer kit using audio signal and voice link.	
		Demonstrate PPM modulation and demodulation using OFC	
		trainer kit using audio signal and voice link.	
		0 0	
26.	Install a solar panel, execute	Select appropriate tools and equipment.	
	testing and evaluate	Install a solar panel to a roof.	
	performance by connecting	Wire a solar panel to a solar controller.	
	the panel to the inverter.	Wire a solar controller to a battery storage station.	
	(ELE/N5902)	Connect storage batteries to a power inverter.	
	,	Wire a power inverter to an electrical service panel.	
		Connect and test solar panel to the Inverter and run the	
		load.	
		Installation of Solar Inverter.	
		installation of Solar inverter.	
27.	Execute the operation of the	Ascertain and select tools, material for the job and make this	
	different process sensor,	available for use in the timely manner.	
identify, wire & test various sensors of different industrial		Plan work in compliance with safety norms.	
		Demonstrate possible solutions and tasks within the team.	
	processes by selecting	Identify sensors used in process industries such as RTDs,	
	appropriate test instruments.	Temperature ICs, Thermocouples, proximity switches	
(ELE/N9484)		(inductive, capacitive and photoelectric), load cells, strain	
		gauge. LVDT by their appearance.	
		Measure temperature of a lit fire using a Thermocouple and	
		record the readings referring to data chart.	
		Measure temperature of a lit fire using RTD and record the	
		readings referring to data chart.	
		Measure the DC voltage of a LVDT.	
		Detect different objectives using capacitive, inductive and	
		photoelectric proximity sensors.	
28.	Assemble, test & troubleshoot	Illustrate to practice the digital trainer kit with safety.	
	various digital controlled of	Identify various digital ICs, test IC using digital IC tester and	
	field devices and execute the	verify the truth table.	
	result. (ELE/N9485)	Construct and verify the truth table of all gates using NOR	
		and NAND gates.	
		Construct an adder cum subtractor circuit and verify the	
		truth table.	
		Construct a decoder and encoder, multiplexer and a de-	
		, , ,	

	multiplexer circuits and verify the truth table.
	Construct a multiplexer and de-multiplexer and verify the truth table.
	Construct and verify the truth table of various flip flop,
	counter and shift register circuits.
29. Perform speed control of DC	Identify different parts for different types of motor.
machine and single phase and	·
three phase AC machines.	motor.
(ELE/N9486)	Connect & run DC shunt motor using 3 point starter.
	Control the speed of DC motor by armature control method and field control method.
	Construct PWM circuit and SCR chopper circuit for the speed control of DC shunt motors.
	Construct a self-hold contactor circuit and run a 3-Phase Induction Motor.
	Connect and run the motor (below 5hp) in star and delta
	connection, record the phase voltage, line voltage and line
	current.
	Connect and operate an induction motor using DOL starter.
	Connect and run a 3-phase motor using manual and
	automatic star-delta starters.
	Reverse the direction of rotation of Induction motor.
	Connect & run three phase induction motors in a sequence
	using contactor & relay.
30. Install, configure and demonstrate the AC and DC	,
drive to control the speed. (ELE/N9487)	•
(EEE/NS407)	Install of AC Drive(similar to SIEMENS MM-420/440)
	Adjust the pressure as per the requirements MM Drive
	Programming/Parameterization for different control
	operations.
	Perform ON/OFF, Forward/Reverse, Jog (R)/Jog (L), braking
	and speed control Familiarization with different parts and
	terminals of DC Drive.
	Perform Parameterization for variation of motor speed
	through POT with Armature voltage feedback (with internal
	setting), through POT with encoder feedback and external
	speed raise/ lower buttons.
31. Perform speed control of servo	Understand and interpret the procedure as per manual of
•	<u> </u>

	motor and test different	servo motor.		
	industrial process circuit by	Select test methods and test use of different parts servo		
	selecting the suitable function.	motor, test control circuits.		
	(ELE/N9488)	Identify various IC and their functions on the given servo		
		motor drive trainer kits.		
		Construct a direction control of various parameters		
		change direction of a servo motor.		
		Write data into a RAM and observe its volatility.		
		Identify the port pins of the controller and configure the		
		input and output operator.		
		Demonstrate entering of simple programs, execute and		
		monitor the result.		
32.	Install, test &control, the	Identify different pneumatic and electro-pneumatic		
-	Electro-Pneumatic actuators	components.		
	using various pneumatic	Construct and control a single acting cylinder and double		
	valves. (ELE/N9489)	acting cylinder.		
	(222,110 100)	Construct and control single/double acting cylinder using		
		series/ parallel circuits.		
		Construct and perform bidirectional control of a cylinder. Construct and control, automatic return of a double acting		
		cylinder.		
		Construct and control the oscillating motion of a double		
		acting cylinder.		
		Construct and control a latching circuit using single or double		
		acting cylinder.		
		Construct and control, automatic return initiated by a limit		
		switch.		
22	Execute the operation of	Identify various indicators on PLC Modules and interpret.		
55.	different indication on PLC	Connect PLC hardware and configure the software.		
	modules and wire different	Wire in various digital and analog input and output devices		
	field devices of PLC and	to the respective modules.		
	configure the system and	Develop and run simple programs to read sensor status and		
	perform the suitable function.	to control various outputs.		
	(ELE/N9490)	·		
	(LLL/143430)	Perform online editing of a rung/network and prepare data		
		tables and monitor.		
24	Pood and apply analysaring	Boad & interpret the information on drawings and apply in		
34.	Read and apply engineering drawing for different	Read & interpret the information on drawings and apply in		
	U	executing practical work.		
	application in the field of work.	Read & analyze the specification to ascertain the material		
		requirement, tools and assembly/maintenance parameters.		
		Encounter drawings with missing/unspecified key		

	information and make own calculations to fill in missing dimension/parameters to carry out the work.
35. Demonstrate basic mathematical concept and principles to perform practical operations. Understand and explain basic science in the field of study.	Solve different mathematical problems Explain concept of basic science related to the field of study

SYLLABUS FORTECHNICIAN POWER ELECTRONIC SYSTEMS TRADE				
	FIRST YEAR			
Duration	Reference Learning Outcome	Professional Skills (Trade Practical) with Indicative Hours	Professional Knowledge (Trade Theory)	
Professional Skill 76Hrs; Professional Knowledge 08Hrs	Perform basic workshop operations using suitable tools for fitting, riveting, drilling etc. following safety precautions. (Mapped NOS: ELE/N9470)	 Trade and Orientation Visit to various sections of the institute and identify location of various installations. (07 hrs) Identify safety signs for danger, warning, caution & personal safety message. (05 hrs) Use of personal protective equipment (PPE). (05 hrs) Practice elementary first aid.(07 hrs) Preventive measures for electrical accidents & steps to be taken in such accidents.(05 hrs) Use of Fire extinguishers.(05 hrs) Use of Fire extinguishers tools. (07 hrs) Selection of proper tools for 	Familiarization with the working of Industrial Training Institute system. Importance of safety and precautions to be taken in the industry/shop floor. Introduction to PPEs. Introduction to First aid. Response to emergencies e.g. power failure, fire, and system failure. Importance of housekeeping & good shop floor practices. Occupational safety &health: Health, safety and environment guidelines, legislations & regulations as applicable. (04 hrs.) Identification, specifications, uses and maintenance of commonly used hand tools. State the correct shape of files for filing different profiles. Riveting of tags and lugs, cutting and bending of sheet metals, chassis and cabinets. (04 hrs.)	
		11. Workshop practice on filing and hacksawing. (02 hrs) 12. Practice simple fitting and drilling. (03 hrs)

	,,	phase shift oscillator	hrs.)
		circuits. (02 hrs)	,
		87. Construct and test a crystal	

		oscillator circuits. (02 hrs)	
		88. Demonstrate Astable,	
		monostable, bistable	
		circuits using transistors.	
		(05 hrs)	
		Wave shaping circuits	Diode shunt clipper circuits,
		89. Construct and test shunt	Clamping/limiting circuits and
		clipper. (03 hrs)	Zener diode as peak
		90. Construct and test series	clipper,uses their applications.
		and dual clipper circuit	(03 hrs.)
		using diodes. (03 hrs)	
		91. Construct and test clamper	
		circuit using diodes. (03 hrs)	
		92. Construct and test Zener	
		diode as a peak clipper.	
		(03 hrs)	
Professional	Plan and construct	Power Electronic Components	Construction of FET& JFET,
Skill 50Hrs;	different power	93. Identify different power	difference with BJT.
	electronic circuits	electronic components,	Purpose of Gate, Drain and
Professional	and analyze the	their specification and	source terminals and voltage/
Knowledge	circuit functioning.	terminals. (06 hrs)	current relations between
10Hrs	(Mapped NOS:	94. Construct and test a FET	them and Impedances
	ELE/N9476)	Amplifier. (14 hrs)	between various terminals.
		95. Construct a test circuit of	Heat Sink- Uses &purpose.
		SCR using UJT triggering.	Suitability of FET amplifiers in
		(10 hrs)	measuring device
		96. Construct a simple dimmer	applications.
		circuit using TRIAC. (10 hrs)	Working of different power
		97. Construct UJT based free	electronic components such
		running oscillator and	as SCR, TRIAC, DIAC and
		change its frequency. (10	UJT.(10 hrs.)
		hrs)	
Professional	Plan and construct	MOSFET & IGBT	MOSFET, Power MOSFET and
Skill 30Hrs;	different power	98. Identify variousPower	IGBT, their types,
	electronic circuits	MOSFET by its number and	characteristics, switching
Professional	and analyze the	test by using a multimeter.	speed, power ratings and
Knowledge	circuit functioning.	(07 hrs)	protection.
05Hrs	(Mapped NOS:	99. Construct MOSFET test	

	ELE/N9476)	circuit with a small load.(08 hrs)	Differentiate FET with MOSFET.
		100. Identify IGBTs by their numbers and test by using a multimeter. (07 hrs) 101. Construct an IGBT test circuit with a small load. (08 hrs)	Differentiate Transistor with IGBT.(05 hrs.)
Professional	Select the	Opto-Electronics	Working and application of
Skill 41Hrs; Professional	appropriate opto- electronics components and	102. Test LEDs with DC supply and measure voltage drop and current using	LED, IR LEDs, Photodiode, photo transistor, their characteristics and
Knowledge	verify the	multimeter. (05hrs)	applications.
06Hrs	characteristics in different circuit. (Mapped NOS: ELE/N9477)	103. Construct a circuit to test photovoltaic cell. (12 hrs)104. Construct a circuit to switch a lamp load using photo diode. (12 hrs)	Optical sensor, Opto-couplers, circuits with Opto-Isolators. Characteristics of LASER
		105. Construct a circuit to switch a lamp load using photo transistor. (12 hrs)	diodes.(06 hrs.)
Professional	Assemble, test and	Basic Gates	Introduction to Digital
Skill 24Hrs;	troubleshoot various	106. Verify the truth tables of	Electronics.
	digital circuits.	all Logic Gate ICs by	Difference between analog
Professional	(Mapped NOS:	connecting switches and	and digital signals.
Knowledge	ELE/N7812)	LEDs. (08 hrs)	Number systems (Decimal,
05Hrs		107. Construct and verify the truth table of all the gates using NAND and NOR gates. (08 hrs)	binary, octal, Hexadecimal). BCD code, ASCII code and code conversions. Various Logic Gates and their
		108. Use a digital IC tester to test the various digital ICs (TTL and CMOS). (08 hrs)	truth tables. (05 hrs.)
Professional	Assemble, test and	Combinational Circuits	Combinational logic circuits
Skill 25Hrs;	troubleshoot various digital circuits.	109. Construct Half Adder circuit using ICs and verify	such as Half Adder, Full adder, Parallel Binary adders, 2-bit
Professional	(Mapped NOS:	the truth table. (03hrs)	and four bit full adders.
Knowledge	ELE/N7812)	110. Construct Full adder with	Magnitude comparators.

05Hrs		two Half adder circuit	Half adder, full adder ICs and
		using ICs and verify the truth table. (05hrs)	their applications for implementing arithmetic
		111. Construct the adder cum	operations.
		subtractor circuit and	Concept of encoder and
		verify the result. (05 hrs)	decoder. Basic Binary Decoder
		112. Construct and test a 2 to 4	and four bit binary decoders.
		Decoder. (03hrs)	Need for multiplexing of data.
		113. Construct and test a 4 to 2	1:4 line Multiplexer/De-
		Encoder. (03hrs)	multiplexer. (05 hrs.)
		114. Construct and test a 4 to 1	
		Multiplexer. (03hrs)	
		115. Construct and test a 1 to 4	
		DeMultiplexer. (03hrs)	
Professional	Assemble, test and	Flip Flops	Introduction to Flip-Flop.
Skill 25Hrs;	troubleshoot various	116. Identify different Flip-Flop	S-R Latch, Gated S-R Latch, D-
	digital circuits.	(ICs) by the number	Latch.
Professional	(Mapped NOS:	printed on them. (05hrs)	Flip-flop: Basic RS Flip Flop,
Knowledge	ELE/N7812)	117. Construct and test four bit	edge triggered D Flip Flop, JK

Percentage - Changing percentage to decimal and fraction.

Material Science

Types metals, types of ferrous and non ferrous metals Introduction of iron and cast iron

Heat & Temperature and Pressure

Concept of heat and temperature, effects of heat, difference between heat and temperature, boiling point & melting point of different metals and non-metals.

Scales of temperature, celsius, fahrenheit, kelvin and conversion between scales of temperature.

Basic Electricity

Introduction and uses of electricity, molecule, atom, how electricity is produced, electric current AC,DC their comparison, voltage, resistance and their units Conductor, insulator, types of connections - series and parallel. Ohm's law, relation between V.I.R & related problems. Electrical power, energy and their units, calculation with assignments. Magnetic induction, self and mutual inductance and EMF generation Electrical power, HP, energy and units of electrical energy

Trigonometry

Measurement of angles Trigonometrical ratios Trigonometrical tables

Industrial Visit/ Project Work

Broad Areas:

- a) Pencil charger indicator.
- b) Delayed automatic power on the circuit.
- c) Neon flasher circuit using IC741.
- d) UJT act as a relaxation oscillator.
- e) Up/down synchronous decade counter.
- f) Test a 4 to 1 multiplexer circuit.
- g) Dimmer circuit of Light & Fan using DIAC & TRIAC.
- h) Timer Circuit using IC-555.

	SYLLABUS FORTECHNICIAN POWER ELECTRONIC SYSTEMS TRADE		
	SECOND YEAR		
Duration	Learning Outcome Reference	Professional Skills (Trade Practical) With Indicative Hours	Professional Knowledge (Trade Theory)
Professional Skill 100Hrs; Professional Knowledge 35 Hrs	Install, configure, interconnect given computer system(s) and demonstrate & utilize application packages for different application. (Mapped NOS: ELE/N3155)	Computer Hardware, OS, MS office and Networking 134. Identify various indicators, cables, connectors and ports on the computer cabinet. (03 hrs) 135. Demonstrate various parts of the system unit and motherboard components. (02 hrs) 136. Identify various computer peripherals and connect it to the system. (05 hrs) 137. Disable certain functionality by disconnecting the concerned cables SATA/PATA. (05 hrs) 138. Replace the CMOS battery and extend a memory module. (03 hrs) 139. Test and Replace the SMPS (02 hrs) 140. Replace the given DVD and HDD on the system (05 hrs) 141. Dismantle and assemble the desktop computer system. (15 hrs) 142. Boot the system from different options (03 hrs) 143. Install OS in a desktop computer. (02 hrs) 144. Install a Printer driver software and test for print outs. (05 hrs) 145. Install antivirus software, scan the system and explore the	Basic blocks of a computer, Components of desktop and motherboard. Hardware and software, I/O devices, and their working. Different types of printers, HDD, DVD. Various ports in the computer. Windows OS MS windows: Starting windows and its operation, file management using explorer, Display & sound properties, screen savers, font management, installation of program, setting and using of control panel, application of accessories, various IT tools and applications. Concept of word processing: MS word — Menu bar, standard tool bar, editing, formatting, printing of document etc. Excel — Worksheet basics, data entry and formulae. Moving data in worksheet using tool bars and menu bars, Formatting and calculations, printing worksheet, creating multiple worksheets, creating charts. Introduction to power point Basics of preparing

			T
		options in the antivirus	,
		software. (03 hrs)	of slides, animation with
		146. Install MS office software. (02	
		hrs)	Concept of Internet,
		147. Create folder and files, draw	1
		pictures using paint. (05 hrs)	engines, email, chatting and
		148. Explore different menu/ tool/	_
		format/ status bars of MS	•
		word and practice the	program files etc.
		options. (05 hrs)	
		149. Explore different menu/ tool/	
		format/ status bars of MS	
		excel and practice the	
		options. (05 hrs)	protocols- TCP/IP, UDP, FTP,
		150. Prepare power point	
		presentation on any three	_
		known topics with various	
		design, animation and visual	
		effects. (05 hrs)	Network components like
		151. Convert the given PDF File	
		into Word file using suitable	
		software. (03 hrs)	and firewall.
		152. Browse search engines,	
		create email accounts,	, ,
		practice sending and receiving	
		of mails and configuration of	
		email clients. (05 hrs)	
		153. Identify different types of	
		cables and network	
		components e.g. Hub, switch,	
		router, modem etc. (02 hrs)	
		154. Prepare terminations, make UTP and STP cable connectors	
		and test. (05 hrs)	
		155. Connect network connectivity	
		hardware and check for its	
		functioning. (05 hrs)	
		156. Configure a wireless Wi-Fi	
		network. (05 hrs)	
Professional	Identify, place,	Basic SMD (2, 3, 4 terminal	Introduction to SMD

Professional Skill 35 Hrs; Professional Knowledge 07 Hrs	Plan and interface the LCD, LED, DPM panels to various circuits and evaluate performance. (Mapped NOS: ELE/N3102)	Digital panel meter: 186. Identify LED Display module and its decoder/driver ICs. (03 hrs) 187. Display a word on a two line LED. (06 hrs) 188. Measure/current flowing through a resistor and display it on LED Module. (06 hrs) 189. Measure/current flowing through a sensor and display it on an LED module (DPM). (08 hrs) 190. Identify LCD Display module and its decoder/driver ICs. (05 hrs) 191. Display a word on a two line LCD. (03 hrs) 192. Measure/current flowing through a sensor and display it on an LCD module (DPM). (04 hrs)	Different types of seven segment displays, decoders and driver ICs for them. Concept of multiplexing and its advantages. Block diagrams of 7106 and 7107 and their configuration for different measurements. Use of DPM (Digital Panel Meter) with seven segment displays to display different voltage & current signals. Principles of working of LCD. Different sizes of LCDs. Decoder/Driver ICs used with LCDs and their pin-out diagrams. Scrolling displays and its design. Use of DPM (Digital Panel Meter) to display different voltage & current signals. (07 hrs.)
Professional Skill 25Hrs; Professional Knowledge 05 Hrs	Assemble, test and troubleshoot single phase & 3-phase controlled and uncontrolled rectifier using SCR. (Mapped NOS: ELE/N9481)	3-Phase Rectifier (controlled &uncontrolled) 193. Construct & test three phase uncontrolled rectifiers (half wave & bridge). (04 hrs) 194. Construct & test single phase Half controlled rectifier using SCR. (04 hrs) 195. Construct & test single phase full controlled rectifier using SCR. (04 hrs) 196. Identify and replace the faulty components. (04 hrs). 197. Test, 3-phase controlled rectifiers under fault condition & rectify faults. (04 hrs) 198. Construct & test three phase controlled rectifiers (half wave & bridge) using SCR. (05	High current rectifiers. Differentiate uncontrolled and controlled rectifiers. Discuss on 3-phase uncontrolled rectifier, control and power circuits and their applications. Discussion on 3-phase controlled rectifiers, control and power circuits and their applications. (05 hrs.)

		hrs)	
Professional	Construct, test &	Chopper	
Skill 25Hrs; Professional Knowledge 05 Hrs	repair different chopper using MOSFET and IC based DC-DC converter and execute the result. (Mapped NOS: ELE/N9482)	 199. Construct & test chopper circuit using MOSFET. (05 hrs) 200. Construct and test step up type chopper circuit. (05 hrs) 201. Construct and test step down type chopper circuit. (05 hrs) 202. Construct and test IC Based DC-DC converter for different voltages. (05 hrs) 203. Test chopper circuit under fault condition and rectify fault. (05 hrs) 	Various types of chopper circuits step up, step down, inverting types. Introduction to DC-DC Converters. Applications of DC-DC converters. ICs used for converting DC-DC. Applications of DC-DC converters. (05 hrs.)
Professional	Detect the faults	Power Supplies & SMPS	
Professional Skill 50 Hrs; Professional Knowledge 12 Hrs	Detect the faults and troubleshoot Power supplies, SMPS, UPS and inverter. (Mapped NOS: ELE/N3102)	 Power Supplies & SMPS 204. Identify different front panel controls and connectors of the given power supply. (04 hrs) 205. Test the given power supply and limit the output to a specific voltage and current. (04 hrs) 206. Open the power supply and identify major sections and power components with heat sinks. (04 hrs) 207. Test the semiconductor power switches of a power supply. (04 hrs) 208. Operate a programmable power supply and test its features. (04 hrs) 209. Identify various input and output sockets/ connectors of the given SMPS. (04 hrs) 210. Apply input and measure outputs using a multimeter. (04 hrs) 	Specifications & block diagram of Linear power supplies. Front panel controls and features of various power supplies. Different types of power switches and heat sinks used in power supplies. Block Diagram of Switch mode power supplies and their working principles. Various ICs used in different types of SMPS. Principles of Inversion and Inverter circuits using different techniques. Pulse width modulation and their applications. (12 hrs.)

		211. Test capacity of the given SMPS. (04 hrs)	
		212. Identify major sections/ ICs/	
		components of SMPS. (08 hrs)	
		213. Measure/ monitor major test	
		1	
		points of SMPS. (05 hrs)	
		214. Identify and replace the faulty	
		components. (05 hrs)	
		(Use SMPS used in TVs and PCs for	
		practice)	
Professional	Detect the faults	<u>Inverters</u>	
Skill 50 Hrs;	and troubleshoot	215. Construct & test simple	Inverter – their principle &
	Power supplies,	inverter circuit using	operation, power rating,
Professional	SMPS, UPS and	transistors/ MOSFET. (04 hrs)	change over period.
Knowledge	inverter.	216. Prepare a load bank using	Installation of Inverters,
12 Hrs	(Mapped NOS:	resistive & Inductive load up	Protection circuits used in
	ELE/N3102)	to 2KW for testing of Inverter	inverters- battery level, over
		& UPS. (04 hrs)	load, over charging etc.
		217. Identify front panel control &	Various faults and its
		indicators of Inverter. (04 hrs)	rectification.
		218. Identify & understand the use	Three phase inverter circuits-
		of back panel sockets	principle and working.
		&connections.(04 hrs)	Installation of single phase &
		219. Connect battery & load to	three phase Inverter.
		Inverter & test on battery	(12 hrs.)
		mode. (04 hrs)	
		220. Open Top cover of Inverter &	
		identify isolator transformer	
		&inverter transformer. (04	
		hrs)	
		221. Identify various circuit boards	
		in Inverter and monitor	
		voltages at various test	
		points. (04 hrs)	
		222. Make load test to measure	
		backup time. (04 hrs)	
		223. Test Inverter under faulty	
		condition & rectify fault. (08

		measure backup time. (02
		hrs)
		233. Test UPS under faulty condition & rectify fault.
		condition & rectify fault. (02hrs)
		234. Perform all above
		experiments for three phase
		UPS. (02 hrs)
Professional	Prepare fiber-optic	Fiber optic Introduction to optical fiber
Skill 15 Hrs;	setup and execute	235. Demonstrate the use of the as a transmission Media, its
,	transmission and	fiber-optic trainer kit. (03 hrs) advantages over other media,
Professional	reception.	236. Make optical fiber setup to properties of optic-fiber,
Knowledge	(Mapped NOS:	transmit and receive analog testing, losses, types of fiber-
05 Hrs	ELE/N9483)	and digital data. (03 hrs) optic cables and
		237. Demonstrate FM modulation specifications. Encoding of
		and demodulation using the light. Fiber optic joints,
		OFC trainer kit using audio splicing, testing and the
		signal and voice link.(03 hrs) related
		238. Demonstrate PWM equipments/measuring tools,
		modulation and precautions to be

		demodulation using the OFC trainer kit using audio signal and voice link. (03 hrs) 239. Demonstrate PPM modulation and demodulation using the OFC trainer kit using audio signal and voice link. (03 hrs)	taken laying of cables, safety aspects while handling optical cables. (05 hrs.)
Professional Skill 30 Hrs; Professional Knowledge 12Hrs	Install a solar panel, execute tests and evaluate performance by connecting the panel to the inverter. (Mapped NOS: ELE/N5902)	 Solar Inverter 240. Connect and test solar panel to the Inverter and run the load. (02 hrs) 241. Mount a solar panel to a roof. (04 hrs) 242. Wire a solar panel to a solar controller.(04 hrs) 243. Wire a solar controller to a battery storage station. (04 hrs) 244. Connect storage batteries to a power inverter. (04 hrs) 245. Wire a power inverter to an electrical service panel. (02 hrs) 246. Test circuits for voltages. (02 hrs) 247. Installation of Solar Inverter. (02 hrs) 248. Take the trainees to the nearest solar power installation and demonstrate various aspects to cover skills 	Need for renewable energy sources, Solar energy as a renewable resource. Materials used in solar cells. Principles of conversion of solar light into electricity. Basics of photovoltaic cell. Types of solar cells. Mono crystalline and poly crystalline PV cells. Define components like Solar cell, Module, panel and Arrays. Factors that influence the output of a PV module. SPV systems and the key benefits. Difference between SPV and conventional power. Define solar charge controller or regulator and its role. Safety precautions while working with solar systems. (12 hrs.)
Professional	Execute the	as specified above. (06 hrs) Sensor	Basics of passive and active
Skill 30 Hrs;	operation of the different process	249. Identify & test different sensors such as RTDs,	transducers – Role, selection and
Professional Knowledge 07 Hrs	sensor, identify, wire & test various sensors of different industrial processes by selecting appropriate test instruments.	thermocouples, proximity sensors, inductive, capacitive& photoelectric), load cells, strain gauge & LVDT, Hall sensor, Tachogenerator. (10 hrs) 250. Test the functionality of all the sensors mentioned above	characteristics. Working principles of RTD, Thermocouple, LVDT, Strain gauge, Proximity sensor, Hall Sensor, Tacho-generator, optical sensors. Sensor voltage and current formats. (07 hrs.)

	(Mapped NOS:	using the trainer kit. (20 hrs)	
	ELE/N9484)	using the trainer kit. (20 ms)	
Professional	Assemble, test &	Digital control of field devices	Digital/logical/on-off control
Skill 20 Hrs;	troubleshoot	Input Devices to develop START	of electrical machines and
	various digital	(Logic 1) and STOP (Logic 0) pulses	other actuators.
Professional	controlled of field	251. Develop AC – DC SIGNAL	Industrial control system:
Knowledge	devices and	CONVERTER using push to ON	electro-magnetic control,
07 Hrs	execute the result.	switch, centre tapped	static control; comparison;
	(Mapped NOS:	transformer type full wave	general block diagram;

Professional	Perform speed	Servo Motor	
Skill 40 Hrs; Professional Knowledge 12 Hrs	control of servo motors and test different industrial process circuit by selecting the suitable function. (Mapped NOS: ELE/N9488)	293. Construct a simple circuit to control servo motor using IC 555.(08 hrs) 294. Connect servo motor with drive & control its parameters. (08 hrs) 295. Connect the servo motor to computer for monitoring & controlling of various parameters. (08 hrs) 296. Parameter programming of servo motor. (08 hrs) 297. Various control method for controlling velocity & torque. (08 hrs)	Servo mechanism, Servo motor principal, Difference between motors & servo motor. Types of servo motor, AC & DC - brushless servo motor &permanent magnet servo motor construction & application. Control method for servo motor. Study of servo drive. (12 hrs.)
Professional	Install, test &	Electronic Pneumatics	Introduction to pneumatic
Skill 30 Hrs;	control, the Electro	298. Identify different pneumatic	power source and measure of
	Pneumatic	and electro pneumatic	compressed air, storage and
Professional	actuators using	components. (02 hrs)	transmission of compressed
Knowledge 12 Hrs	various pneumatic valves.	299. Construct and control a single acting cylinder. (02 hrs)	air, applications of pneumatics in the industries.
121113	(Mapped NOS: ELE/N9489)	300. Construct and control a double acting cylinder. (02 hrs) 301. Construct and control single/double acting cylinder using series/ parallel circuits. (02 hrs)	Symbols of different pneumatic and electro-pneumatic components. Various supply elements such as compressors, reservoir, pressure regulating valve, service unit etc.
		302. Construct and perform bidirectional control of a cylinder.(04 hrs)	Various input elements such as push button valves, roller lever valves, proximity
		303. Construct and control, automatic return of a double acting cylinder. (04 hrs)	switches, Air barriers etc. Various pneumatic control elements, processing
		304. Construct and control the oscillating motion of a double acting cylinder. (02 hrs)	elements such as directional control valves, shuttle valves, non-return valves, pressure
		305. Construct and control a latching circuit using single or double acting cylinder. (02 hrs)	control valves, Timers and sequencers etc. Function and application of solenoid valves.
		306. Construct and control,	Limit switches, memory
		automatic return initiated by	valves, pressure dependent

perform practical operations.	Estimation and Costing Simple estimation of the requirement of material etc., as applicable
Understand and explain basic science in the field	to the trade. Problem son estimation and costing.
of study.	

Industrial Visit/ Project Work

Broad Areas:

- a) Smoke detector.
- b) Water level sensor.
- c) Run a three phase motor using manual and automatic star-delta starters.
- d) Solar power inverter.
- e) Control single/double acting cylinder using series/parallel circuit.
- a) Simple programs to read sensor status and to control.

SYLLABUS FOR CORE SKILLS

1. Employability Skills(Common for all CTS trades) (120Hrs + 60 Hrs)

Learning outcomes, assessment criteria, syllabus and Tool List of Core Skills subjects which is common for a group of trades, provided separately inwww.bharatskills.gov.in

	List of Tools & Equipment				
	TECHNICIAN POWER ELECTRONIC SYSTEMS (For batch of 24 Candidates)				
S No.	Name of the Tools and Equipment	Specification	Quantity		
A. TRAINI	EES TOOL KIT (For each additional ur	nit, trainees tool kit Sl. 1-12 is requ	uired additionally)		
1.	Connecting screwdriver	100 mm	12nos.		
2.	Neon tester 500 V.	500 V	6 nos.		
3.	Screwdriverset	Set of 7	12nos.		
4.	Insulated combination pliers	150 mm	6 nos.		
5.	Insulated side cutting pliers	150mm	8 nos.		
6.	Long nose pliers	150mm	6 nos.		
7.	Soldering iron	25 Watt, 240 Volt	12nos.		
8.	Electrician knife	100 mm	6 nos.		
9.	Tweezers	150 mm	12 nos.		
10.	DigitalMultimeter	(3 3/4 digit),4000 Counts	12nos.		
11.	Soldering Iron Changeable bits	15 Watt, 240 Volt	6 nos.		
12.	De-soldering pump electrical	230 V, 40 W	12nos.

26.	Bench Vice	Bench Vice - 125 mm Bench Vice - 100 mm Bench Vice - 50 mm	1 no. each
List of Eq	uipments		
27.	Dual DC regulated power supply	30-0-30 V, 2 Amps	4 nos.
28.	DC Regulated Variable Programmable DC Power Supply	0-30V/3A	2 nos.
29.	LCR meter (Digital) Handheld		1 no.
30.	CRO Dual Trace	20 MHz (component testing facilities)	2 nos.
31.	Signal Generator with Digital Display for Frequency Amplitude	10 Hz to 100 kHz, 50/600 Ohms (output impedance)	2 nos.
32.	Battery Charger	0 - 6 - 9 - 12 - 24 , 15 Amps	1 no.
33.	Analog multimeter		4 nos.
34.	Clamp meter	0 - 10 A	2 nos.
35.	Function generator (DDS Technology (Sine, Square, Triangle, Ramp, Pulse, Serial Data, TTL and Modulation.)	1 mHz -10 MHz Function- Pulse – Modulation Generator with Built in 40MHz Frequency Counter	2 nos.
36.	Dimmer starter	3 Amps	2 nos.
37.	Autotransformer	15 Amps	2 nos.
38.	Analog Component Trainer	Breadboard for Circuit design with necessary DC /AC power supply: • 8 pin ZIF socket • 16 pin ZIF socket • Resistor bank • Capacitor bank • Potentiometers • Diodes	4 nos.

39.	Milli Ammeter (AC)	 Zener diodes NPN Transistor N-channel MOSFET LED Bread board Ready to use Experimental Boards Lab Manual with list of experiments to perform various experiments 0 – 200 mA 	2 nos.
40.	Milli Ammeter (DC)	0 – 500 mA	2 nos.
41.	Op Amp trainer	 ±15V, ±12 and +5V fixed DC power supply 8pin ZIF socket 16 pin ZIF socket Resistor bank Capacitor bank Potentiometers Bread board Built in oscillator: sine, square and triangular waveform 	2 nos.
42.	Digital IC Trainer	Breadboard for Circuit design with necessary DC Power Supply, Graphical LCD, Clock Frequency 4 different steps, Data Switches: 8 nos., LED Display: 8 nos. (TTL), Seven Segment Display, Teaching Simulation Software	4 nos.
43.	Digital and Analog IC Tester		1 no.
44.	Digital and Analog Bread Board Trainer	DC/AC Power Supply, Sine/ Square/ TTL Generator Data Switches,LED indication, LED Display: 8 in nos. Simulation/Teaching Content through software	6 nos.
45.	Rheostats various values and ratings		2 nos. Each
46.	POWER ELECTRONICS TRAINER With at least 6 nos. of application		4 no.

	board MOSFET Characteristics SCR Characteristics SCR Lamp Flasher SCR Alarm Circuit Series Inverter Single Phase PWM Inverter		
47.	Computers with LAN card, Blue- Ray drive and player, MS Office education version.	CPU: 32/64 Bit i3/i5/i7 or latest processor, Speed: 3 GHz or Higher. RAM:-4 GB DDR-III or Higher, Wi-Fi Enabled. Network Card: Integrated Gigabit Ethernet, with USB Mouse, USB Keyboard and Monitor (Min. 17 Inch.) Licensed Operating System and Antivirus compatible with trade related software.	4 nos.
48.	Laptops latest configuration		1 no.
49.	Laserjet Printer		1 no.
50.	Internet broadband connection		1 no.
51.	Electronic circuit simulation software with 6 user licenses	Circuit Design and Simulation Software with PCB Design with Gerber and G Code Generation, 3D View of PCB, Breadboard View, Fault Creation and Simulation.	1 no.
52.	Different types of electronic and electrical cables, connectors, sockets, terminations		As required
53.	Different types of Analog electronic components, digital ICs, power electronic components, general purpose PCBs, bread board, MCB, ELCB		As required
54.	DSO (colour)	4 Channel, 50MHz Real Time Sampling 1G Samples/Sec, 12 Mpts Memory with PC Interface USB, LAN and math function includes +, -, FFT, differential, integral, ABS, logs etc.	1 no.

55.	Soldering & De-soldering Station		1 no.
56.	SMD Soldering & De soldering Station with necessary accessories	SMD Rework Station: Soldering station: Output Voltage:26V – 40V AC Temp Range: 50 to 4800 C Desoldering Station: Output Voltage: 24V – 40V AC Vacuum Generator: Vacuum pump: double cylinder type Vacuum Pressure: 80 k Pa Suction flow: 15 L/min. Hot air station: Air flow: 1-9 L/min Temp:50 o 500 °C Hand piece of Hot air accessories	2 nos.
57.	DOL starter	½ HP	1 no.
58.	AC Motor Trainer Kit ¼ HP motor Single Phase Contactors Relays MCB DOL Starter		1 no.
59.	Microcontroller kits (8051) along with programming software (Assembly level Programming)	Core 8051, ready to run programmer for AT89C51/52 & 55, programming modes Key Pad and PC circuits. Detailed learning content through simulation software.	4 nos.
60.	Application kits for Microcontrollers 6 different applications	1. Input Interface: 4x4 Matrix Keypad, ASCII Key PAD, Four Input Switch 2. Display Module 16X2 LCD, Seven Segment, LED Bar Graph 3. ADC/DAC Module with most popular DC/DAC0808 4. PC Interface: RS232 & USB 5. Motor Drive: DC, Servo, Stepper	1 set

		6. DAQ: Data Acquisition to	
61.	Sensor Trainer Kit containing following Sensors 1. Thermocouple 2. RTD 3. Load Cell/ Strain Gauge 4. LVDT 5. Smoke Detector Sensors 6. Speed Sensor 7. Limit Switch 8. Photo sensors 9. Optocouplor 10. Proximity Sensor	sense different sensor signals Graphical touch LCD with inbuilt processor for viewing the output waveforms, Inbuilt DAQ, and standard processing circuits like Inverting, Non – Inverting, Power, Current, Instrumentation Differential Amplifier, F/V,V/F,V/I,I/V Converter, Sensors:RTD,NTC Thermistor,LM35 Thermocouple, Gas(Smoke) Sensor, Load cell, LVDT Sensor, Speed Sensor	2 nos.
62.	Various analog and digital ICs useful for doing project works mentioned in the digital and analog IC application modules		As required
63.	Different types of electronic and electrical cables, connectors, sockets, terminations.		As required
64.	Fiber-optic communication trainer	Full Duplex Analog & Digital Trans-receiver with 660nm & 950nm, Noise Generator with variable gain, Four, Seven Segment Display BER Counter, Eye Pattern.	2 nos.
65.	Seven segments DPM trainer		6 nos.
66.	Precision set of screwdrivers-	T5, T6, T7	2 nos.
67.	SMPS of different make		4 nos.
68.	UPS trainer		As required.
69.	UPS		As required.
70.	Allen key screwdriver	5 no. of set	1 set
71.	Jacket stripper/ Coring tool for 500 series cable		1 no.
72.	Center conductor cleaner		1 no.

73.	Universal drop trimmer for RG 6/11 cables		1 no.
74.	F - connector tool for RG 6/11 cables		1 no.
75.	F – connector compression tool for RG 6/11 cables		1 no.
76.	Solar Training Kit/ Simulator	With built in meters for DCV, DCA, AC Multifunction Meter (for ACI, ACV, Power, Frequency), Protection Circuits, BS-10 terminals for making the connection, Single/ Dual axis tracking system Charge Controller: PWM basedMPPT, Charging Stage: Bulk, Absorptions and Float	1 no.
77.	LED lighting system	Measurement of Power, Voltage, Current, Power Factor and Light output performance of different lighting products like LED, CFL at variable input voltages 0 to 245V variable AC	2 sets
78.	DC shunt motor	1HP with 3 point starter	1 no.
79.	Tachometer	Digital type 10000RPM	2 nos.
80.	Rheostat	1Kohm	2 nos.
81.	3 phase induction motor	1Hp with DOL starter	1 no.
82.	Squirrel induction motor	5 HP with star-delta starter	1 no.
83.	1hp motor	DC drives trainer with phase control method	1 no.
84.	1hp motor	DC drive trainer with SCR chopper circuit	1 no.
85.	Programmable DC drive with motor	(Simoreg DC master) 6RA70	1 no.
86.	Solarpanel based Inverter	500VA	1 no.
87.	3 phase motor	1 HP, VVVF drive trainer	1 no.
88.	AC motor	1hp, AC drive (Siemens Micro master 420)	As required
89.	PLC Systems with digital I/P, O/P modules Trainer kit and software	6 Digital Inputs (24V DC). 4 Digital Outputs (24V DC) 2K Words of memory, 256	3 nos.

	1		1
		words of register.	
		Powerful features like built in	
		Floating Point, Sub Routines	
		etc.	
		One RS232 C communication	
		facility for PC interface.	
		Three channels can be	
		configured as follows,	
		Pulse width modulation	
		output or Pulse train output	
		or High speed counter input.	
90.	Solenoid	24 V AC	4 nos.
91.	Lamp	24 V AC	6 nos.
92.	AC power supply	24 V, 50 Hz, 2 A	As required
93.	DC power supply	+12 V 2 A	2 nos.
94.	DC power supply	+5 V 2 A	2 nos.
95.	Electronic Pneumatics Trainer kit		2 nos.
96.	Servo Motor drivesTrainer kit		2 nos.
D. Shop Floor Furniture and Materials - For 2 (1+1) units no additional items are required.			
97.	Instructor's table		1 no.
98.	Instructor's chair		2 nos.
99.	Metal Rack	100cm x 150cm x 45cm	4 nos.
100	Lockers with 16 drawers		2
100.	standard sizes		2 nos.
101.	Steel Almirah	2.5 m x 1.20 m x 0.5 m	2 nos.
			2 no. (one for
